

VIRTUAL PROJECT MANAGEMENT (VPM)

Why GEL?

- Over 36 Years of Experience
- Specially Designed 52,000 Sq. Ft. Facility
- Comprehensive Quality Programs and Systems
- Experienced and Responsive Project Team
- Extensive Electronic Capabilities and Online Tracking

GEL Laboratories, LLC (GEL) is a leader in the advancement of information technology in the environmental laboratory industry. Our proprietary networked laboratory information management system (LIMS) is one of the most advanced in the industry today. In order to bring this valuable system to our customers, we offer online access to our Virtual Project Manager (VPM) application. The VPM is a private client portal that stores all data reports in one easy and secure location only accessible by username and password. The GEL VPM was created to operate on multiple data devices including personal computers, tablets, and phones. Files can easily be accessed from anywhere, anytime from the internet.

GEL's VPM features:

Data File Cabinet - This allows access to EDDs, data packages, invoices, chains of custody and login review reports. The data file cabinet also includes the ability for our clients to upload and store project documents

Sample Data Inquiry - This provides information on samples received at GEL and their due dates. Clients can search for sample information by sample ID, collection date ranges, chain of custody numbers, and SDG numbers. The same files stored in the data filing cabinet are present for each work order.

Interactive Data Trending - Clients can lookup results and trend data by sample location or analyte over a specified period.

Document Downloads - Clients can access many of GEL's resources, including but not limited to, our chain of custody form, a certification list, and a catalog of GEL's analytical services.

If you are interested in setting up an account please contact your GEL project manager.
